

Getting started

Data on the Line · A case in demand forecasting and line balancing

Four steps on your laptop

- 1 Open the address on the right in your browser: click it or type it in. On that page, click **Open in Colab** in the English section. Before the session you'll open the setup test; in the session, the case notebook.
- 2 Sign in with your Google account; Colab needs one.
- 3 If you see the warning that the notebook wasn't written by Google, choose **Run anyway**.
- 4 Start with *Runtime* → *Run all*. The data files are downloaded automatically.

Good to know

- The case text, the case notebook and the slide template will be added to the same page on the day of the session.
- The passwords for the two protected files are announced in the room at minutes 45 and 95.
- Colab clears your files if a session sits idle for too long; save a copy every now and then with *File* → *Save a copy in Drive*.
- When you run the last cell, your submission file (submission.zip) is downloaded to your computer.

All the files and notebooks are on this page:
